

LECTURE NOTES 2-5: CONTINUITY (DAY 1)

QUESTION: In plain old words in English, what *should* it mean to say

the function $f(x)$ is continuous at $x = a$?

around $x = a$, the graph of $f(x)$ should have no holes or jumps.

On the axes below, draw some pictures of graphs that are NOT continuous at some point and label that point with the x -value a . Succinctly describe why it's not continuous.

jump discontinuity

jump discontinuity

jump discontinuity

jump discontinuity

removable discontinuity

infinite discontinuity

DEFINITION: A function $f(x)$ is continuous at the number $x = a$ if

$$\lim_{x \rightarrow a} f(x) = f(a)$$

(i.e. what happens "close" to $x=a$ better be the same as what happens at $x=a$.)

PRACTICE PROBLEMS: For each function below, state the numbers for which $f(x)$ is continuous and the numbers for which $f(x)$ is discontinuous. For each point of discontinuity, explain why it is discontinuous.

1. $f(x)$ is graphed below. Assume arrows indicate the function continues in that general direction.

(a) continuous?

$$(-\infty, -5) \cup (-5, -3) \cup (-3, 0) \cup (0, 2) \cup (2, \infty)$$

(b) discontinuous and why?

$$x = -5 \text{ infinite or } \lim_{x \rightarrow -5} f(x) = DNE$$

$$x = -3 \text{ jump or } \lim_{x \rightarrow -3} f(x) \neq f(-3)$$

$$x = 0 \text{ jump or } \lim_{x \rightarrow 0} f(x) = DNE$$

$$x = 2 \text{ jump or } \lim_{x \rightarrow 2} f(x) = DNE$$

$$2. g(x) = \begin{cases} \cos x & x < 0 \\ 2 & x = 0 \\ 1 - x^2 & 0 < x \leq 1 \\ x - 1 & 1 < x \end{cases}$$

(a) continuous?

$$(-\infty, 0) \cup (0, \infty)$$

(b) discontinuous and why?

$$x = 0.$$

$$\lim_{x \rightarrow 0} g(x) = 1 \neq 2 = g(0).$$

a jump discontinuity

$$3. h(x) = \frac{x^3 - 8}{x^2 - 4} = \frac{(x-2)(x^2 + 2x + 4)}{(x+2)(x-2)}$$

(a) continuous?

$$(-\infty, 2) \cup (-2, 2) \cup (2, \infty)$$

(b) discontinuous and why?

$$x = -2, \text{ infinite discontinuity, } \lim_{x \rightarrow -2} h(x) = DNE.$$

$$x = 2, \text{ removable discontinuity, } f(2) = DNE.$$
