## Section 4.9: Antiderivatives

1. Find a particular antiderivative of $f(x)=9+x-x^{2}$.
2. Find all antiderivatives of $f(x)=9+x-x^{2}$.
3. Find an antiderivative of $f(x)=\frac{1}{x^{2}}$.
4. To find all antiderivatives of a function $f(x)$, do you always just add a $+C$ ? Explain how to construct a "generic" piecewise function where you're not using just $+C$ to describe all antiderivatives.
5. For each of the following functions, find a particular antiderivative.

| Function | Antiderivative |
| :---: | :---: |
| $x$ |  |
| $x^{2}$ |  |
| $x^{3}$ |  |
| $x^{k}(k \neq-1)$ |  |
| $x^{-1}$ for $x>0$ |  |
| $x^{-1}$ for $x<0$ |  |
| $x^{-1}$ for all $x$ |  |

| Function | Antiderivative |
| :---: | :---: |
| $\sin (x)$ |  |
| $\cos (x)$ |  |
| $e^{x}$ |  |
| $1 /\left(1+x^{2}\right)$ |  |
| $(\sec (x))^{2}$ |  |
| $\sec (x) \tan (x)$ |  |
| 1 |  |

6. Compute an antiderivative of $f(x)=15 x^{20}+44 x^{10}+8$
7. Compute an antiderivative of $f(t)=\frac{5 \sec t \tan t}{3}-4 \sin t-\frac{1}{t}+e^{2}$
8. Compute an antiderivative of $f(x)=\cos (3 x)$.
9. Compute the antiderivative of $f(t)=t^{2}$ that equals 5 when $t=2$.
