

Name: \_\_\_\_\_

There are 25 points possible on this quiz. This is a closed book quiz, but you are allowed to use a calculator and a ruler. **Please show all of your work!** If you have any questions, please raise your hand.

Exercise 1. (3 pts.) Find a formula for the inverse of the function  $h(x) = \ln(2 - 5x)$ .

- Switch  $x$  and  $y$ .  
 $x = \ln(2 - 5y)$
- Solve for  $y$ .  
 $e^x = 2 - 5y$

$$5y = 2 - e^x$$

$$y = \frac{1}{5}(2 - e^x)$$

answer:  $h^{-1}(x) = \frac{1}{5}(2 - e^x)$

Exercise 2. (3 pts.) Solve  $\sin x = 1$ .

answer:

$$x = \dots -\frac{3\pi}{2}, \frac{\pi}{2}, \frac{5\pi}{2}, \frac{7\pi}{2}, \dots$$

or

$$x = 2\pi k + \frac{\pi}{2} \text{ for any integer } k.$$

Exercise 3. (4 pts.)

- Graph  $h(x) = 2 + e^{x+1}$  on the grid given below. You must clearly label any asymptotes and explicitly label two points on your sketch.
- The graph of the function  $f(x)$  is given below. Draw on the same axes the function  $g(x) = 3f(x)$ .

Exercise 4. (6 pts.) Determine whether the following statements are true or false. Circle T or F.

- a)  $(e^{5x})^2 = e^{25x^2}$  c)  $(a+b)^2 = a^2 + 2ab + b^2$  e)  $\ln(ex) = 1 + \ln x$   
 $\neq$   $\neq$   $\neq$   
 $e^{10x}$  T or F T or F T or F  
 b)  $\sqrt{x^2 + y^2} = x + y$  d)  $\frac{x^8}{x^{-3}} = x^5$  f)  $\tan^{-1} x = \frac{1}{\tan x} = (\tan x)^{-1}$   
 T or F T or F T or F

Exercise 5. (3 pts.) Find the domain of the function  $f(x) = \frac{\sqrt{x-1}}{9-x^2}$ . Give your answer in interval notation.

Work: We need  
 ①  $x-1 \geq 0$  or  $x \geq 1$   
 and  
 ②  $9-x^2 \neq 0$  or  
 avoid  $x = \pm 3$

answer: The domain of  $f(x)$  is  $[1, 3) \cup (3, \infty)$

Exercise 6. (3 pts.) Expand the following logarithm:  $\ln\left(\frac{\sqrt{x^2+4}}{2x}\right)$

$$\ln\left(\frac{(x^2+4)^{\frac{1}{2}}}{2x}\right) = \ln(x^2+4)^{\frac{1}{2}} - \ln(2x)$$

$$= \frac{1}{2} \ln(x^2+4) - \ln 2 - \ln x$$

↑  
can't be factored

Exercise 7. (3 pts.) Find an equation of the line through the points  $(2, 3)$  and  $(7, 1)$ . State the slope and the  $y$ -intercept.

$$m = \frac{\Delta y}{\Delta x} = \frac{+3-1}{2-7} = \frac{2}{-5} = \frac{-2}{5} = m \text{ slope}$$

line

$$y-1 = \frac{-2}{5}(x-7)$$

$$y = -\frac{2}{5}x + \frac{14}{5} + 1$$

$$y = -\frac{2}{5}x + \frac{19}{5} \text{ equation}$$

$$b = \frac{19}{5} \text{ intercept}$$

observe that all parts of the problem are clearly answered.
